

ARC-PB Plasterboard Flush Mounted Aluminium LED Profile - Including Diffuser

Product Code: ARC-PB

Product Overview

The ARC-PB Plasterboard Flush Mounted Aluminum LED Profile is a premium architectural lighting solution designed to seamlessly integrate linear LED lighting into plasterboard walls and ceilings.

Crafted from high-quality aluminum, this recessed profile not only provides excellent heat dissipation for LED strips but also delivers a sleek, minimalist finish that sits flush with the surrounding surface once plastered.

The included opal diffuser softens and evenly distributes light, eliminating hot spots and creating a continuous ribbon of illumination ideal for modern residential and commercial spaces. With perforated flanges that help plaster adhere securely, installation results in a smooth, professional look without visible edges.
